

Protect valuables without changing the look of windows with UV-Gard film by Madico

UV-Gard window film from Madico filters out over 99% of ultra-violet light while still allowing the maximum amount of visible light into a space. This optically-clear film was designed with museums and retail store-fronts in mind where both maximum light transmission and fade control are necessary.

UV-Gard has also proven to be an excellent choice for homes, schools and office buildings where UV exposure is a health concern. Hospitals and nursing home facilities also benefit by being able to offer additional protection to their patients and residents. UV-Gard can also be used in specialty devices for individuals highly sensitive to UV rays.

UV-Gard blocks over 99% of ultraviolet light in the range of 300 to 385 nanometers. Most clear window films block only UV rays up to 375 or 380nm, but UV-Gard's protection up to 385 nm starts to cover the lower portion of the visible light region - a region which also contains harmful UV rays. This ability to block this lower portion of the visible light region is what sets UV-Gard apart from standard films.

While many different factors contribute to fading, ultraviolet light is one of the main culprits. You can see the result of it in the form of damage to fabrics, flooring and artwork. You can feel the effects of ultraviolet light on your skin after spending time outside or even after sitting in front of a sunlit window. Even on a cloudy day, some ultraviolet light is present and can still cause harm.

Museum curators understand the profound effect that the sun has on valuables and appreciate the added layer of protection that UV-Gard offers. Retail store owners are also always striving to protect their goods from damaging ultraviolet rays while still attracting buyers in off the street. UV-Gard delivers the protection they need without altering the view.

All Madico films are installed by professional dealers and carry a comprehensive manufacturer's warranty.

Commercial & Residential Applications

- Museums
- Hotels
- Homes
- Retail
- Hospitals
- Schools

Wherever there is glass.... We can improve it.
